TYPESCRIPT FOR PRODUCTION TEAMS

TypeScript cheat-sheet

Narrowing you will actually use

Narrow with typeof, instanceof, in and discriminated unions before reaching for a cast.

Every `as` is a promise you are making to the compiler. Keep the list short.

```
type Result<T> =
  | { ok: true; value: T }
  | { ok: false; error: string };

function unwrap<T>(r: Result<T>): T {
  if (!r.ok) throw new Error(r.error);
  return r.value;
}
```

The five utility types worth memorising

Partial<T> - every property optional. Omit<T, K> - drop keys.

Pick<T, K> - keep keys. Record<K, V> - map a key union to values.

ReturnType<typeof fn> - derive instead of duplicating.

Strict flags, in migration order

1. strictNullChecks 2. noImplicitAny 3. strictFunctionTypes

4. noImplicitThis 5. strictBindCallApply 6. exactOptionalPropertyTypes
